flawa iQ professional first aid

Button functions
Advanced system variant

The button on the control system of the monitored eyewash station is a multi-function button. It lets you operate the station directly on site. The Advanced system variant offers the following functions:

Signal test

Checks the connection quality on site.

Manual data transfer

Sends the data to the iQ Portal immediately at the press of the button.

Check reception quality

Checks the signal strength at the installation site.

Wi-Fi configuration

Sets up the Wi-Fi connection directly on the device.

Our support team will gladly give you further details on the functions and operation.

flawa iQ professional first aid

Button functions
Pro system variant

The button on the control system of the monitored eyewash station is a multi-function button. It lets you operate the station directly on site. The Pro system variant offers the following functions:

Alarm function

Hold the button down until it goes out. This directly alerts the first aiders registered for the site.

Signal test

Checks the connection quality on site.

Manual data transfer

Sends the data to the iQ Portal immediately at the press of the button.

Check reception quality

Checks the signal strength at the installation site.

Wi-Fi configuration

Sets up the Wi-Fi connection directly on the device.

Our support team will gladly give you further details on the functions and operation.
